

**Description:**

The PEFLEX EPP Nipple Ø198 mm is a component of the PEFLEX EPS 2.0 system. It allows for seamless connection with standard Ø200 mm ventilation ducts, such as spiral steel ducts (Spiro) and flexible ducts (e.g., SONODEC), which can additionally serve as silencers when connected to the HRV unit.

Made of expanded polypropylene (EPP), it features high thermal insulation, water resistance, and low weight, while providing a connection free of thermal bridges.

The nipple is push-fit onto the end of an EPS Ø200 mm duct or fitting, with built-in gaskets ensuring an airtight connection. It is not intended for joining individual components of the PEFLEX EPS 2.0 system; those should be connected using the dedicated EPP coupling.

**Dimensions:**

Product	Internal Diameter	Length	Wall Thickness	Material
PEFLEX EPP Nipple 198	198 mm	100 mm	12 mm	EPP
