

Description:

The PEFLEX PP 2x75 plenum box is designed to connect two $\varnothing 75$ mm ducts to a $\varnothing 125$ mm spigot leading to an air diffuser in mechanical ventilation systems. Its purpose is to reduce air velocity, which helps equalize and stabilize airflow, minimize noise, and ensure quiet, uniform system operation.

It is available in versions suitable for floor and ceiling installation, in long-socket, short-socket, and nipple-type extension variants. Thanks to its very low-profile body – only 60 mm in height – the plenum box is ideal for buildings with limited floor insulation thickness (50–60 mm).

The $\varnothing 75$ mm couplings with integrated gaskets and the CLIK connection system ensure quick and airtight duct installation, while the welded construction provides high durability. Unused inlets can be sealed with $\varnothing 75$ mm end caps.

Technical Specifications:

- **Material:** Polypropylene (PP)
- **Number and diameter of connection sockets:** 2 x $\varnothing 75$ mm
- **Maximum airflow:** 60 m³/h
- **Connection system:** CLIK couplings with integrated gaskets
- **Diffuser spigot diameter:**
 - Socket-type: $\varnothing 125$ mm (internal) / 129 mm (external)
 - Nipple-type (for extension): 123 mm (external)
- **Spigot length:**
 - Long-socket: 300 mm
 - Short-socket: 40 mm
 - Nipple: 40 mm
- **Installation:** Floor-mounted version / ceiling-mounted version

Dimensions:

Long-socket variant
for direct installation of a $\varnothing 125$ air diffuser

floor-mounted version

ceiling-mounted version

Short-socket variant

for direct installation of a Ø125 air diffuser

floor-mounted version

ceiling-mounted version

Nipple variant

for extension

floor-mounted version

ceiling-mounted version
